Wireless Purchasing Made Easy

Multi-Carrier Purchasing Solution

Movêro's mConnect Portal Makes Buying Wireless Devices Easy

Movêro mConnect is a secure multi-carrier purchasing portal for mobile devices, software and associated services. Sites are custom generated to match the customer's carrier contract, discount structure, special terms, purchasing authorization processes and can be integrated with exiting supply chain management systems.

Easy to Create and Support

Designed as an easy to set up service for enterprises who have concerns about timely

delivery of new mobile service, mConnect is a powerful tool to automate the purchase, change or cancel service with their selected carrier. Movêro's unique back-end integration with wireless carriers provides customers with easy access to current service plans and devices without having to keep track of these promotions independently for each carrier. In addition the integrated rules engine allows organizations to set preferred service plans or devices based on corporate policy.

Approval Process

Only Movêro has a multi-level work flow authorization engine that combines groups of both authorizers such as purchasing or

management and notifiers such as IT departments or employees who simply need to know about changes. The unique management interface can accommodate a wide variety of corporate authorization processes to speed delivery and ensure fraud avoidance.

Features

- Multi-Carrier Purchasing
- Company Discount Pricing
- Up to Date Information
- Asset Management
- Secure Multi-Layer Authorization

About Movêro

Movêro is the first service company providing innovative solutions for the acquisition, deployment and ongoing management of corporate cellular and data access. Through mFrame, our proven service delivery management approach, Movêro improves customer productivity while lowering lifecycle costs through intelligent access to information.
